

Quiz Questions:

Quiz Questions:

Question 1:

What is the value of `result` in the following code?

```
x = 15
y = 4
result = x // y
```

- a) 3.75
- b) 3
- c) 4
- d) 4.5

Question 2:

What is the output of the following code?

```
a = 7
b = 3
c = a % b
print(c)
```

- a) 2
- b) 1
- c) 3
- d) 4

Question 3:

Which assignment operator is equivalent to `x = x * 5`?

a) `x **= 5`

b)

`x /= 5`

c)

`x *= 5`

d)

`x %= 5`

Question 4:

What is the result of the expression `5 < 3 or 2 == 2` ?

a) True

b) False

c) Error

d) None of the above

Question 5:

If `a = True` and `b = False` , what is the value of `not a or b` ?

a) True

b) False

c) Error

d) None of the above

Coding Exercise:

Exercise 1:

Write a Python program to calculate the area of a rectangle using the given formula: `area = length * width` . Take the values of length and width as inputs from the user.

Exercise 2:

Write a Python program to demonstrate incrementing and decrementing a variable

Exercise 3:

Write a Python program to convert temperature from Celsius to Fahrenheit. The formula for conversion is: `F = (C * 9/5) + 32` . Take the temperature in Celsius as

input from the user.

Exercise 4:

Write a Python program to calculate the simple interest given the principal amount, rate, and time (in years).

Exercise 5:

Write a Python program to concatenate two strings and display the result. The strings should be taken as input from the user.

Exercise 6:

Write a Python program to convert a distance from kilometers to miles.
