Which method is used to check if a string starts with a specific prefix?

- a) `startswith()`
- b) `startwith()`
- c) `beginwith()`
- d) `initwith()`

Coding Exercise :

Problem:

You are given a string `sentence`. Print the characters at even indices.

Example:

```
sentence = "Python is amazing"  
# Output: "Pto saaig"
```

Problem:

You are given a string `s`. Replace all spaces in the string with underscores (`_`) and print the modified string.

Example:

```
s = "Python is fun and powerful"  
# Output: "Python_is_fun_and_powerful"
```

Problem:

You are given a string `s`. Check if the string contains only digits.

Example:

```
s = "12345"
```

Problem:

You are given a string `s`. Print the string in reverse order.

Example:

```
s = "Python is amazing"  
# Output: "gnizama si nohtyP"
```

Problem:

You are given a string `s`. Capitalize the first letter of each word in the string and print the modified string.

Example:

```
s = "python programming is fun"  
# Output: "Python Programming Is Fun"
```
