

Dictionary Quiz:

Question 1:

What is the output of the following code?

```
my_dict = {'a': 1, 'b': 2, 'c': 3}
print(len(my_dict))
```

- a) 1
- b) 2
- c) 3
- d) 4

Question 2:

Which method is used to add a new key-value pair to a dictionary?

- a) `add()`
- b) `insert()`
- c) `append()`
- d) `update()`

Question 3:

Consider the following dictionary:

```
my_dict = {'name': 'python', 'age': 30, 'city': 'Tadepalligudem'}
```

How can you access the value associated with the key 'age'?

- a) `my_dict.get('age')`
- b) `my_dict['age']`
- c) `my_dict.value('age')`

d) `my_dict.retrieve('age')`

Question 4:

What happens if you try to access a key that doesn't exist in a dictionary using square brackets notation?

- a) It returns None.
- b) It raises a KeyError.
- c) It returns False.
- d) It adds the key to the dictionary.

Question 5:

Which of the following methods returns a list of all the keys in a dictionary?

- a) `keys()`
- b) `get_keys()`
- c) `all_keys()`
- d) `list_keys()`

Task 1: Dictionary Update

Write Python code to add a new key-value pair to the following dictionary:

```
my_dict = {'name': 'python', 'age': 25}

# Your code here

# Output should be: {'name': 'python', 'age': 25, 'city': 'west godavari'}
```

Task 2: Dictionary Access

Write Python code to access and print the value associated with the key 'price' in the following dictionary:

```
product_info = {'name': 'Laptop', 'brand': 'Dell', 'price': 1200}
```

```
# Your code here
```

```
# Output should be: 1200
```

Task 3: Dictionary Removal

Write Python code to remove the key-value pair with the key 'city' from the following dictionary:

```
my_dict = {'name': 'python', 'age': 30, 'city': 'Bhimavaram'}
```

```
# Your code here
```

```
# Output should be: {'name': 'John', 'age': 30}
```

Task 4: Dictionary Keys

Write Python code to print all the keys present in the following dictionary:

```
my_dict = {'name': 'python', 'age': 25, 'city': 'Rajahmundry'}
```

```
# Your code here
```

```
# Output should be: ['name', 'age', 'city']
```

Task 5: Dictionary Values

Write Python code to print all the values present in the following dictionary:

```
my_dict = {'name': 'python', 'age': 25, 'city': 'tanuku'}

# Your code here

# Output should be: ['python', 25, 'tanuku']
```

Exercise 1: Dictionary Update

Write a Python script that updates a dictionary with a new key-value pair.

Exercise 2: Dictionary Access

Write a Python script that accesses and prints the value associated with a specific key in a dictionary.

Exercise 3: Dictionary Removal

Write a Python script that removes a key-value pair from a dictionary.

Exercise 4: Dictionary Keys

Write a Python script that prints all the keys present in a dictionary.

Exercise 5: Dictionary Values

Write a Python script that prints all the values present in a dictionary.
